U.S. Patent and Trademark Office PTOL-326 (Rev. 1-04)

Art Unit: 1642

DETAILED ACTION

Page 2

1. Claim 60 and 66 have been amended in the amendment of 1/24/05.

2. Claims 52-54, 57, 60-66, 68 are pending and under examination.

3. The text of those sections of Title 35 U.S.C. code not included in this office action can be found in a prior Office Action.

4. The following Office Action contains some NEW GROUNDS of rejection.

Rejections Withdrawn

5. All previous rejection have been withdrawn.

Claim Objections

6. Claim 53 is objected to because of the following informalities: Claim 53 recites the isolated nucleic acid having the sequence set forth in SEQ ID NO:1. SEQ ID NO:1 is a protein sequence not a DNA sequence. Appropriate correction is required.

The following are NEW GROUNDS of rejections

Claim Rejections - 35 USC § 112

7. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the

Art Unit: 1642

art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

8. Claims 52-54, 60-66, 68 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This is a written description rejection.

This rejection is in two parts, one for the term "5T4" antigen and one for DNA that hybridizes to claim 54 (claim 60).

The first part applies to the term "5T4" antigen and the antibody of SEQ ID NO:1. This antibody only binds to the human "5T4" antigen and there is no other "5T4" antigen except the canine of SEQ ID NO:14 described in the specification. There is no indication that SEQ ID NO:1 would bind to the canine antigen. Thus, the specification only describes an antibody that binds to the human antigen and not all "5T4" antigens as encompassed in the claims.

There is insufficient written description encompassing "5T4 antigen" because the relevant identifying characteristics of the genus such as structure of other physical and/or chemical characteristics of the "5T4 antigen" are not set forth in the specification as-filed, commensurate in scope with the claimed invention. Vas-Cath Inc. v. Mahurkar, 19 USPQ2d 1111, makes clear that "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the 'written description' inquiry.

Art Unit: 1642

whatever is now claimed." (see page 1117). The specification does not "clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." (see <u>Vas-Cath</u> at page 1116).

Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it. See <u>Fiers v. Revel</u>, 25 USPQ2d 1601, 1606 (CAFC 1993) and <u>Amgen Inc. v. Chugai Pharmaceutical Co.</u> <u>Ltd.</u>, 18 USPQ2d 1016.

One cannot describe what one has not conceived. See <u>Fiddles v.Baird</u>, 30 USPQ2d 1481, 1483. In <u>Fiddles v. Baird</u>, claims directed to mammalian FGF's were found unpatentable due to lack of written description for the broad class. The specification provided only the bovine sequence. Thus, the specification fails to describe these DNA sequences. The Court further elaborated that generic statements are not adequate written description of the genus because it does not distinguish the claimed genus from others, except by function. Finally, the Court indicated that while applicants are not required to disclose every species encompassed within a genus, the description of a genus is achieved by the recitation of a representative number of DNA molecules, defined by nucleotide sequence, falling within the scope of the genus, <u>See</u>

The Reagents of the University of California v. Eli Lilly and Company, 43 USPQ2d 1398, 1406 (Fed. Cir. 1997).

In the absence of structural characteristics that are shared by members of the genus of "5T4 antigen"; one of skill in the art would reasonably conclude that the disclosure fails to provide a representative number of species to describe the genus.

Art Unit: 1642

Thus, Applicant was not in possession of the claimed genus. See <u>University of California v. Eli Lilly and Co.</u> 119 F.3d 1559, 43 USPQ2d 1398 (Fed. Cir. 1997).

Applicant is reminded that <u>Vas-Cath</u> makes clear that the written description provision of 35 U.S.C. 112 is severable from its enablement provision (see page 1115).

The second part of the rejection is because of claim 60 and the broadness of any DNA that hybridizes to SEQ ID NO:5 or the complement. The claimed nucleic acids do not have to have any function. Thus applicants were not in possession of all of the nucleic acids encompassed by the claim. The claim is drawn to a genus of nucleic acids all of which hybridize to SEQ ID NO:5 or its complement and do not have any known function.

In the absence of structural characteristics that are shared by members of the genus of any nucleic acid that hybridizes to SEQ ID NO:5 or its complement; one of skill in the art would reasonably conclude that the disclosure fails to provide a representative number of species to describe the genus. Thus, Applicant was not in possession of the claimed genus. See <u>University of California v. Eli Lilly and Co.</u> 119 F.3d 1559, 43 USPQ2d 1398 (Fed. Cir. 1997).

Applicant is reminded that <u>Vas-Cath</u> makes clear that the written description provision of 35 U.S.C. 112 is severable from its enablement provision (see page 1115).

Applicant is directed to the Revised Interim Guidelines for the Examination of Patent Applications Under the 35 U.S.C. 112, paragraph 1 "Written Description"

Art Unit: 1642

Requirement, Federal Register, Vol. 66, No. 4, pages 1099-1111, Friday January 5, 200 1.

Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 10. Claims 60, 62, 64 are rejected under 35 U.S.C. 102(e) as being anticipated by Shimamura et al (US Patent 5,856,140, filed 4/96).

The claims recite a DNA that hybridizes under claimed conditions to SEQ ID NO:5 or its complement and a vector and a promoter linked to the DNA.

Shimamura et al teach a nucleotide sequence of SEQ ID NO:3 wherein nucleotides 397-482 are identical to nucleotides 31-116 of SEQ ID NO:5 (See attached sequence comparison) and the nucleotide of Shimamura et al is in a vector and has a promoter since it is a single chain antibody construct.

Although the claims recite a specific hybridization condition, it is the Examiner's position that Shimamura et al's DNA would hybridize under those condition. Since the Patent and Trademark Office does not have the facilities for examining and comparing

Page 7

the claimed nucleic acid with the nucleic acid of Shimamura et al, the burden of proof is upon the Applicants to show a distinction between the structural and functional characteristics of the claimed nucleic acid and the nucleic acid of the prior art. See In re Best, 562 F.2d 1252, 195 U.S.P.Q. 430 (CCPA 197) and Ex parte Gray, 10 USPQ 2d 1922 1923 (PTO Bd. Pat. App. & Int.).

The response filed 1/24/05 has been carefully considered but is deemed not to be persuasive. The response states that "selectively hybridizing" means at a level significantly above background and cannot encompass random primers (see page 4 of response). In response to this argument, it is the examiner position that the nucleic acid of the prior art would hybridize under the recited conditions and be above background significantly. In addition, random primers were not cited as prior art.

Conclusion

- 11. Claim 57 is in condition for allowance.
- 12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Larry R. Helms, Ph.D, whose telephone number is (571) 272-0832. The examiner can normally be reached on Monday through Friday from 6:30 am to 4:00 pm, with alternate Fridays off. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Siew, can be reached at (571) 272-0787.
